

Power cost reduction is simple in the Territory thanks to our abundant sunshine, and it's not just homeowners who are benefiting, with strata buildings and businesses also reaping huge savings.

RESIDENT SOLAR ENERGY

SUNSHINE SAVINGS WITH COUNTRY SOLAR NT

Since 2010, award-winning locally owned and operated solar specialist Country Solar NT (CSNT) has been providing quality, affordable solar PV and energy efficient electrical solutions to local homes, businesses and government agencies throughout the Territory. 'Our in-house team designs, installs and maintains PV systems to the NT building code and solar industry best practice,' CSNT owner Jeremy Hunt said. 'A typical household 6 kW solar system in the Territory can cut your electricity bills by thousands or more a year. Few investments can rival that return.' In late 2018 Darwin City Council commissioned a 217 kW grid-connected PV system for the library and offices on Harry Chan Avenue, which was won via competitive tender by CSNT due to their prior experience in the successful completion of several larger systems around the Northern Territory and their strong local presence. 'The vast roof area of the building was ideal for the system,' Jeremy advised. 'Their system will offset 356 tonnes of Co2 annually and provide significant financial savings over the life of the system. The Council is more than pleased with its decision, with the system already delivering savings beyond their expectations.' Now is the time for Territory homeowners and businesses to install solar energy systems, with government incentives making the purchase even more viable.
