

ARE YOU SAVING ENERGY YET? MAKE YOUR HOME SOLAR AND REAP THE BENEFITS

Now is the time for Territory homeowners and businesses to be installing solar energy systems. The cost of energy from the local grid has risen 80 percent in the past ten years and is expected to continue.

Since 2010 Country Solar NT (CSNT) has been providing quality, affordable solar PV and energy efficient electrical solutions to local homes, businesses and government throughout the Territory.

'Reducing your power cost is simple in the Territory with our abundant sunshine,' says CSNT owner, Jeremy Hunt. 'The reduction cost of solar equipment components over the last ten years, along with the current Government incentives make purchasing now even more viable.

Few investments can rival the return on a residential or commercial solar system. Put simply a typical 6 kW household solar system in the Territory will cut your electricity bills by thousands or more a year.'

Award-winning locally owned solar specialist CSNT has the proven in-house capacity to design and install any PV system size. We design, install and maintain PV systems to the NT building code and Solar Industry best practice.

'Right from the start, we were very impressed with Country Solar NT,' said Tiwi resident Jane Bade. 'One of my sons sourced all the quotes and information and discussed it with his brother and me. Country Solar NT was the best by far.'

'Their attention to detail during quoting, the design, installation and even follow-up has been exemplary,' she adds. 'Each of us had systems installed, and we're all showing hugely reduced power bills. We're extremely happy.'

The Bade's overall system size is 6.27kWp, generating around 25kWh per day.

'We haven't received a power bill since our installation,' said Bayview residents, Michael and Tammy Stefanidikos. 'But we'd recommend Jeremy and his team anytime.

Not only are they local, but they're also professional and always there. They made the overall process stress-free for us. The NT Government Rebate made it additionally attractive for us. Solar is a good selling or rental point. Everyone should go solar, especially while the rebates are on offer.'

Michael and Tammy's overall system size is 9.14kWp generating an average of 40kWh per day, and they are expected to save around \$10 per day.

At Country Solar NT you deal directly with the owner, manager or salesperson. Their friendly staff will provide a timely response and their engineers and designers will ensure the best system is offered to the customer each time.
