

SKIN

SOLUTIONS

AS INDIVIDUAL AS YOU

PHOTOGRAPHY MARK AND TIM
WORDS NANNETTE HOLLIDAY

For 25 years the expert team at multi-award-winning Ella Baché Fannie Bay have been offering Territory residents and visitors an extensive range of treatments that focus on skin solutions as individual as you.

OBSERV 520
'Our new Observ 520 advanced diagnostic system is a game-changer. Its advanced camera technology allows us to see deep into the layers of the skin, highlighting any underlying skin concerns,' Debby says. 'This allows our skin therapists to take both preventative and restorative action for clients.' You place your head in the canopy and the Observ 520 takes six photographs with varying lights. These images provide insight into skin concerns and the extent of damage beyond what is noticeable to the naked eye. The therapists then create a customised treatment plan so you can enjoy the skin you have always desired. Plus you are preventing future imperfections by using the right products and skin treatments today. The Observ 520 skin analysis is 100 per cent safe, painless and extremely informative.

The latest technology in skin analysis.

'As part of the elite worldwide network of Ella Baché salons, we provide a full range of high-performance products and services including microchanneling,' owner Debby Bell says. 'Delivered by highly trained professional skin therapists and combined with our new equipment, it ensures your skin looks and feels radiant.'

MediLUX
'The MediLUX is the highest-strength LED light therapy machine on the market today. LED therapy is enormously beneficial, but without discomfort or irritation,' Debby says. 'Light therapy corrects even more skin imperfections in one place than ever before. The red, yellow, green and blue lights combine to make an exclusive blend of skin-perfecting light therapy.' MediLUX LED treatments are so versatile they can be performed on areas of concern other than the face, including the décolleté, stomach, back, hands and more. Ella Baché Fannie Bay's skilled skin therapists will conduct a detailed consultation to match your skin concerns with a targeted LED treatment.

The LED green light treats pigmentation on the face.
