

RESIDENT BEAUTIFUL SKIN

REVITALISE YOUR SKIN SAFELY

Territory Laser Clinic (TLC) has been helping Territorians achieve beautiful skin since 2012, and now exclusively offers medical-grade Omnilux LED Light Therapy. Developed 16 years ago, Omnilux is the most tested, most trusted brand of LED system on the market today.

Holly using Omnilux Blue LED Light Therapy.

Real results using Omnilux Medical LED Light Therapy now at Territory Laser Clinic.

Each light therapy delivers a different skin treatment. Red light to soften fine lines and improve skin tone while plumping and hydrating skin. Blue kills acne bacteria that causes the redness and inflammation of acne. Infrared light gets deeper into the tissue to stimulate cells that produce collagen and elastin, leading to super-smooth skin.

If you have a skin problem don't wait any longer. Call Territory Laser Clinic and get the problem fixed. You'll be surprised how easy it can be, and be delighted with the results.

Omnilux is a medical device that uses light-emitting diode (LED) technology. Clinically proven wavelengths of light stimulate specific cells within the skin, to reverse the effects of ageing and restore a younger, healthier-looking skin. Omnilux treatments are affordable, relaxing, non-invasive and pain-free, plus no downtime means you can return to work immediately. 'As fully qualified Dermal Therapists we're big fans of non-invasive procedures like Omnilux. It ticks all the right boxes,' TLC owner Holly Copping said. 'LED Light Therapy is used to treat wrinkles, pigmentation, rosacea and acne. It also increases collagen levels, and is suitable for both men and women of all ages and skin types. Even after one treatment the skin appears smoother, brighter and clearer.' Unique to Omnilux are the individual treatment heads that deliver three different wavelengths of light—red, blue and infrared—precisely into the skin. Omnilux Revive delivers red light to soften fine lines and improve skin tone while plumping and hydrating skin. Omnilux Plus transmits infrared light deeper into the tissue to stimulate cells that produce collagen and elastin, leading to super-smooth skin. Omnilux Blue kills acne bacteria that causes the redness and inflammation of acne while decreasing pore size

and stabilising oil production to promote healthier skin. Unlike other treatments, where the effects are short-lived, Omnilux results continue to improve for up to six months after light therapy. A treatment regime will be tailored specifically for you during a comprehensive skin consultation at TLC. 'Most people don't know the difference between a chain clinic, beauty salon and what a boutique clinic such as TLC offers,' Holly continued. 'Beauty Therapists do not specialise in dermal therapies. All my staff have nationally accredited dermal therapy qualifications through AACDS College in Perth. AACDS graduates use the title Dermal Therapist to differentiate us. We specialise in performing advanced skin therapies like Omnilux Light Therapy, acne treatments including scar removal, laser treatments such as tattoo removal, skin rejuvenation and hair reduction, plus chemical peels, sublimative skin rejuvenation, stretch marks, and more. We're a results-oriented clinic. It's important our clients feel amazing in the skin they're in.' **If you want to revitalise your skin safely, contact the professionals at Territory Laser Clinic today, Suite 28, 119 Reichardt Road, Winnellie Ph: 8984 4110 www.territorylaserclinic.com.au**
